Ultraviolet rays
HeLa cells, 129

Molecular conformation
Adenine nucleotides
Cadmium, 263
Magnesium, 263
Zinc, 263

Moments
Flagella
Hydrodynamics, 113

Muscles
Heart
Electrical properties, 151
Syncytia
Electrical properties, 151

Myelin
Sciatic nerve
Electron density, 495
Fourier analysis, 495

Myoglobin
Photodissociation
Soret/Q band absorbance, 455
Photolysis
Spectrum analysis, 455
Subunit kinetics, 455

N

Nerve fibers, myelinated
Cesium
Diffusion, 17
Membrane potentials, 17
Diffusion
Fiber length, 17
Mathematical model, 17
Ions
Axoplasmic flow, 17
Diffusion, 17
Potassium
Diffusion, 17
Membrane potentials, 17

Neurons
Interspike intervals
Probability density functions, 385
Retina
Interspike intervals, 385

Nickel
Adenine nucleotides
Fluorescence decay, 263

Normal density functions
Hemoglobins
Electron spin resonance, 301

Nuclear magnetic resonance
Erythrocytes
Water exchange, 389
Gramicidins
Sodium, 535

Nucleotides
Fluorescence
Decay, 263

O

Ohms law
Network thermodynamics
Compartmental analysis, skin, 87
Syncytia
Spherical tissue, 151

Oxonyl dyes
Phospholipids
Adsorption, mathematical model, 63
Adsorption, spectrophotometric study, 63
Binding kinetics, 63
Cell membrane permeability, 63
Plant agglutinins, 63
Vesicle interactions, 63
Potassium
Cell membrane permeability, 63
Sodium
Cell membrane permeability, 63

Oxygen
Hemoglobins
Equilibrium properties, 379
Heme-heme interactions, 379

P

Pancuronium
Alamethicin
Cell membrane permeability, 549
Membrane potentials, 549
Lipids
Membrane potentials, 549

Papain
Membranes
Proton diffusion, 1

pH
see Hydrogen-ion concentration

Phloretin
Adsorption
Isotherms, 295
Lipids, 295
Anions
Electrical conductivity, 295
Cations
Electrical conductivity, 295
Lipids
Cell membrane permeability, 295
Electrical conductivity, 295
Membranes, 295

Phospholipids
Hydrocarbons
Chain tilt angle, 253
Membranes
X-ray diffraction, 495
Oxonyl dyes
Adsorption, mathematical model, 63
Adsorption, spectrophotometric study, 63

Phospholipids (cont'd)
Binding kinetics, 63
Cell membrane permeability, 63
Plant agglutinins, 63
Vesicle interactions, 63

Photic stimulation
Bacteriorhodopsin
Coumarin, 465
Enthalpy, 355
Proton release, 341
Rhodamine, 465
Thermodynamics, 355

Photodissociation
Myoglobin
Soret/Q band absorbance, 455

Photolysis
Myoglobin
Spectrum analysis, 455
Subunit kinetics, 455

Photosynthesis
Exciton decay process
Mathematical model, 513
Fluorescence
Exciton decay process, 513
Plants
Electron transfer, 277

Plant agglutinins
Oxonyl dyes
Phospholipids, 63

Plants
Electron transfer
Electron spin resonance, 277
Photosynthesis, 277
Photosystem I, 277
Radical repair mechanism, 277
Spectrum analysis, 277

Potassium
Cytoplasm
Adsorption, 45
Biological transport, 33
Isothermal, isotopic phase distribution, 45
Oocytes, salamander, 33, 45
Nerve fibers, myelinated
Diffusion, 17
Membrane potentials, 17
Oxonyl dyes
Cell membrane permeability, 63
Purkinje fibers
Electrical conductivity, 217

Potassium chloride
Arsenazo III
Complex formation, 541
Bacteriorhodopsin
Proton release, 341

Probability density functions
Neurons
Interspike intervals, 385

Proflavine
Virus, SV40
Photodynamic Induction, 209

Protons
Bacteriorhodopsin
Energy conversion, 341
Flash-induced release, 341
Halobacterium halobium, 341
Diffusion
Buffers, 1
Electric fields, 1
Electrolytes, 1
Hydrogen-ion concentration, 1
Mathematical model, 1
Membranes, 1
Salts, 1

Purkinje fibers
Current distribution
Radial nonuniformity, 217
Electrical conductivity
Voltage clamping, 217
Electrophysiology
Sheep heart, 217
Intercellular clefts
Electrical conductivity, 217
Membrane potentials
Mathematical model, 407
Potassium
Electrical conductivity, 217
Sodium
Electrical conductivity, 217, 407
Ion currents, 407
Membrane potentials, 407
Tetrodotoxin, 407
Tetrodotoxin
Membrane potentials, 407

Pyrimidine dimers
Ultraviolet rays
DNA, 129

R

Raman spectra
Retinalaldehyde
Schiff bases, 443
Retinol, all-*trans*-anhydro-
Bacteriorhodopsin, 443
Hexane, 443
Retinal pigments, 443

Retina
Membranes
Microviscosity, 489
Neurons
Interspike intervals, 385

Retinal

Retinal pigments
Retinol, all-*trans*-anhydro-
Raman spectra, 443

Retinalaldehyde
Schiff bases
Raman spectra, 443

Retinol, all-*trans*-anhydro-
Bacteriorhodopsin
Raman spectra, 443
Hexane
Raman spectra, 443
Retinal pigments
Raman spectra, 443

Rhodamine
Bacteriorhodopsin
Photic stimulation, 465

S

Salt
see Sodium chloride

Sarcoplasmic reticulum
Membranes
Microviscosity, 489

Sciatic nerve
Myelin
Electron density, 495
Fourier analysis, 495

Serum albumin, bovine
Membranes
Proton diffusion, 1

Short circuits
Bacteriorhodopsin
Membranes, 465
Sodium
Skin, frog, 87

Slender bodies
Flagella
Energy metabolism, 113

Sodium
Cell membrane permeability
Skin, frog, 87
Cytoplasm
Adsorption, 45
Biological transport, 33
Isothermal, isotopic phase distribution, 45
Oocytes, salamander, 33, 45
Diffusion
Compartmental analysis, skin, 87
Electric conductivity
Skin, frog, 87
Gramicidin
Cell membrane permeability, 535
Ion-peptide interactions, 535
Nuclear magnetic resonance, 535
Skin, frog, 87
Oxonyl dyes
Cell membrane permeability, 63
Purkinje fibers
Electric conductivity, 407
Electrical conductivity, 217
Ion currents, 407

Sodium (cont'd)
Membrane potentials, 407
Tetrodotoxin, 407
Short circuits
Skin, frog, 87

Sodium chloride
Diffusion
Network thermodynamics, 323
Electric current
Thermodynamic coupling, 323
Electrical conductivity
Computer simulation, 323
Epithelial membrane, 323
Mathematical model, 323
Network thermodynamics, 323

Soft tissue neoplasms
Water proton spin-lattice relaxation time
Kidney, liver, mouse, 203
Muscle, mouse, 203
Spleen, mouse, 203

Solutes
Cytoplasm
Quantitation method, 33
Oocytes, salamander
Reference phase analysis, 33

Spectrum analysis
Myoglobin
Photolysis, 455

Spermatozoa
Flagella
Cell movement, 421
Dynein, 421

Steady-state
Methanol
Glutamate dehydrogenase, 555

Sucrose
Diffusion
Oocytes, salamander, 45
Water
Oocytes, salamander, 45

Surface properties
Cell membrane
Vesicle cleavage, 107

Syncytia
Electrical conductivity
Mathematical model, 151
Eye
